A

Write a program that outlines objects in images using the A* algorithm

To outline objects in images using the A* algorithm, we can follow these steps: 👍 🗨

1. Import the necessary libraries, including any libraries for reading and processing images, and the A* algorithm implementation.

📋 Copy code

```
import cv2
from AStar import AStar
```

2. Read the image using the OpenCV library and convert it to grayscale. This will make it easier to process the image and extract the outlines of the objects.
